UNIVERSAL LIGHTPROBE

A TWO-PART SOLUTION FOR LED TESTING

The combination of various pre-programmed Sensors with a wide choice of **Fiber-Optic Probes**, produces a **Universal LightProbe** that suits any LED test application. Start by choosing a pre-programmed Sensor for the type of test and output you require (Part 1), then, combine it with an interchangeable Fiber-optic Probe (Part 2) to further customize the test for mechanical requirements and constraints.

PART 1: SENSORS

Universal LightProbe Sensors are pre-programmed for various types of tests, and are available with a choice of outputs.

ANALOG OUTPUT:

Penta Sensor - our best selling sensor. Features color-binning and intensity test.

Spectra Sensor - features user-defined color-boundaries and intensity test.

Unicolor Sensor - is pre-programmed to sense intensity for any single color, or white, or IR or UV.

SERIAL DIGITAL OUTPUT/USB INTERFACE:

Spectra USB Sensors - to test any color in the visual spectrum, and intensity. Popular for Functional Test.

DIGITAL OUTPUT:

Unicolor Digital Sensors - to test a single color with a one-bit PASS/FAIL test output.

Blinx Digital Sensors - for blinking LEDs.

Ultra-High Sensivity Sensors - for extremely dim LEDs.

PART 2: FIBER-OPTIC PROBES

Universal LightProbe Fiber-Optic Probes are combined with the Universal LightProbe Sensor to further refine your test. Choose from several models of Fiber-Optic Probes to meet your precise requirements for testing LEDs. There are three primary ways to tailor the probe, as shown below.

APERTURE TYPES:

There are four choices of Fiber-optic Probe apertures (**Small- Aperture, Wide Aperture, Contacting-Tip** and **Very-Wide-Aperture**) to allow for specific requirements in spacing, alignment, and working distance from the LED, as well as LEDs that are difficult to access.

CABLE TYPE:

Choose from four cable types ("**Regular**", "**Superflex**", "**Rugged**" and Stainless Steel encased "**Rigid**" models). This allows for specific requirements of LED access, spacing and harsh working conditions.

TIP LENGTH AND TIP SHAPE:

The stainless-steel encased tip that interfaces with the LED comes in a variety of lengths (**Short, Long, and Extra-Long**), and **Right-Angle** to account for variations in working distance, LED orientation and accessibility.

UNIVERSAL LIGHTPROBE SENSOR SENSITIVITY SELECTION GUIDE:

Optomistic Products offers a selection of Universal LightProbes for testing various intensity LEDs. Sensor selection depends on several factors, including:

- The size of LED under test
- The brightness of the LED under test (check the manufacturers data sheet for intensity in mcd)
- The type of Universal LightProbe Fiber-optic Probe being used for the test
- The air-gap between the fiber-optic probe tip and the LED under test
- Whether the LED is being tested through translucent material of unknown transmission characteristics.

The chart below serves as a guide to determine which sensor and fiber-optic probe is best for your specific LED test application.

UNIVERSAL LIGHTSOURCE INFRA-RED (IR) EMITTER

Universal LightSources™ emit Infra-red (IR) radiant energy and are designed for the testing of IR (infra-red) sensors used in remotely-controlled products. The emitters are available in eight different IR wavelengths: 830nm, 850nm, 870nm, 875nm, 880nm, 890nm, 940nm and 950nm, with radiant intensities commonly used for such IR emitters. The Universal LightSources use a standard 5-volt regulated DC power supply connected via a connecting cable with mating coaxial power plug supplied with each LightSource. Alternatively, the Universal LightSource can be connected to a serial-digital pulse-code-modulated signal source.

Part Number ULS-SL-IR-XXX - (XXX indicates peak wavelength in nanometers)

A **Universal LightSource** can be mounted with a single-hole mounting clip (also supplied). For fixture mounting, choose from a wide variety of **Universal LightProbe** fiber-optic probes, which can be coupled to the IR LightSources to probe an IR sensor under test.

Clamp and Connector Cable included. Add Universal LightProbe Fiber-Optic Probe if required

UNIVERSAL LIGHTPROBE INSTALLATION ACCESSORIES

UNIVERSAL LIGHTPROBE SENSOR SIX-PACK:

The Universal LightProbe Sensor Six-Pack provides a compact and efficient way to install six Universal LightProbe Sensors in a single space-saving unit. Two standard circuit-board header connectors enable the use of standard ribbon cable connectors. A single power and a single ground wire is all that is needed to connect as many as six Sensors.

The Sensor Six-Pack will accommodate any combination of the pre-programmed Universal LightProbe Sensor models, which can then be paired with a wide variety of Fiber-optic Probes. This includes the popular Penta Sensor combined with the “Trident” Fiber-optic Probes to test a total of 18 LEDs per Sensor Six-Pack.

PART NUMBER: S6P (Sensors and Fiber-optic Probes sold separately)

Easy Installation: Two tapped (4-40) mounting holes are used for installation with ¼ in./ 6.35mm stand-offs. Both 10-pin and 14-pin standard circuit-board header connectors accommodate either analog or digital Sensor outputs.

See Application Note **AN47** for details on installation

Note: Ribbon cable / wire-wrap / stand-offs to be supplied by customer

UNIVERSAL LIGHTPROBE SENSOR SIX-PACK SHOWN WITH
SENSORS AND COMBINATION OF VARIOUS FIBER-OPTIC PROBES

SENSOR SIX-PACK RETAINING CLAMP: The Sensor Six-Pack Retaining Clamp is used to keep the Sensors in place when the Sensor Six-Pack is mounted in a horizontal position, or, if there is a lot of movement of the test fixture.

Part Number: S6P-RC
